## Investment Strategy

**“Scalping trading style focusing on one of the most stable and solid trend forming US Index for fast profits and impressive growth and ultra-low drawdown.”**

The strategy focuses on manually scalping/day trading the Dow Jones symbol to maximize the opportunities that this US based index provides. With many years experience of the Dow Jones, we implement this knowledge with the help of private indicators to execute the scalping trades at the best possible point and exit to bring consistent profits. The strategy does not involve arbitrage, grid, martingale, averaging, hedging or pyramiding and is performed by a team of traders that monitor the markets 24/5. The strategy does not involve continuous trading, instead it is preferred to wait strong signals to execute the scaling strategy and lock in profits.

## Risk Management

Risk management is key to success and the strategy combines all elements of trading to keep risk at the lowest level possible. As the strategy is scalping and day trading we avoid retracement of trends and to reduce risk exposure. The strategy executes medium volume orders so can be considered medium risk although results of the strategy provide low risk output as there is implemented capital protection and risk management to keep risk as low as possible.

### Account Management Highlights
